VSys Anywhere
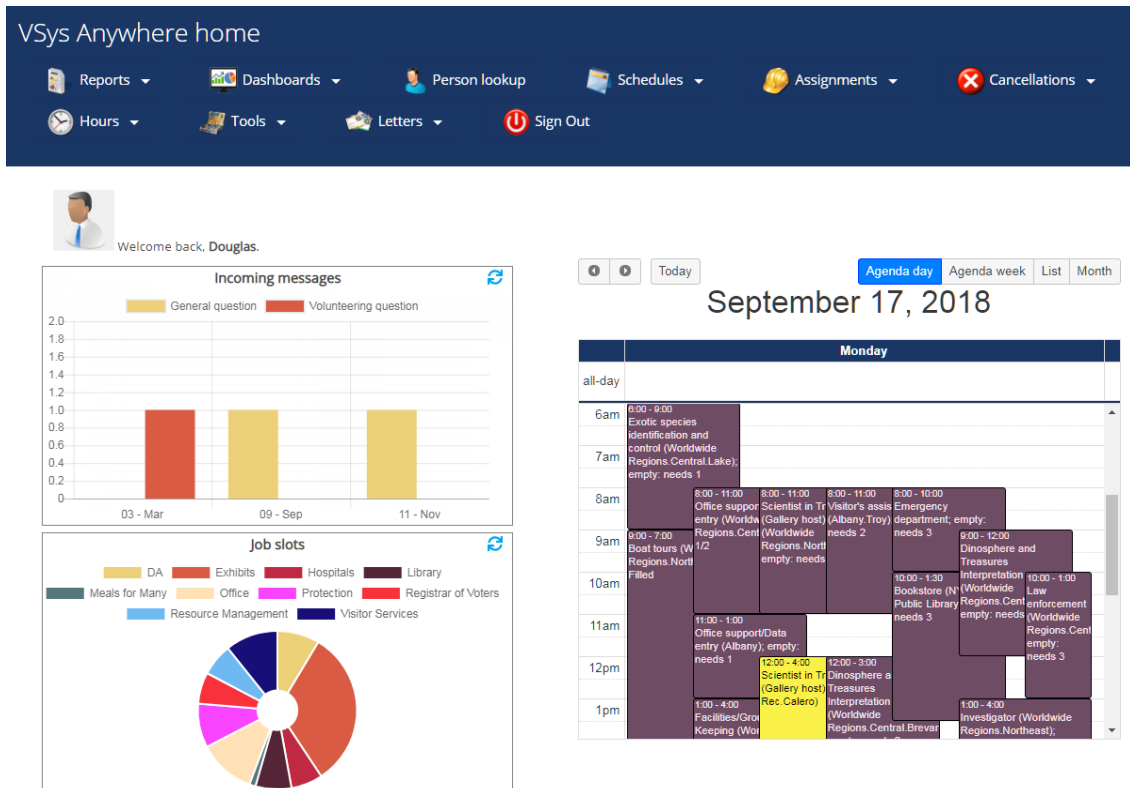

VSys Anywhere is the new browser-based administration tool for VSys One. VSys Anywhere comes with:

- Intuitive interface.
- Advanced dashboards.
- Powerful reporting, exporting and communication tools.
- Profile editing, scheduling, approval, hours crediting, job setup, letters/e-mails and 100+ other tools.
- All of the most-used features from VSys One, easily accessed with any modern web browser on your desktop, tablet or smartphone.

Notes

- VSys One isn't completely replaced by VSys Anywhere: you still need VSys One for superuser/advanced setup, configuring security, designing new advanced reports, building your VSys Live and VSys Anywhere sites, etc.
- While VSys Anywhere looks like VSys Live, it's not: VSys Anywhere is designed for your staff to use to manage volunteers, where VSys Live is for use by volunteers to manage themselves.

System requirements

- VSys Anywhere runs in a Server 2012 or Server 2016 environment. 2+GB memory, 2x CPU cores, 40GB disk for a single instance.
- Connects to your existing VSys One database (SQL Server).
- Works within your existing virtualization environment (VMWare, Hyper-V, etc.).
- If externally facing, requires customer-provided SSL certificates for security (we provide certs for `*.vsysanywhere.com` if we're hosting).
- No development or customization required.
