

### What Is VSys Lite?

VSYS LITE is the streamlined version of VSys that can be used *in conjunction with VSYS ONE* by staff members who don't need access to the depth of features in VSYS ONE.

VSYS LITE lets you to give your staff just the tools and access they need, is designed to be easy to use and customizable – with lower licensing and support costs.

### Tool profiles

VSYS LITE is based on VSYS ONE's concept of "tool profiles". Tool profiles let you define the user interface by dragging and dropping tools onto the screen that each staff member will use. Here's some of what your staff can do with VSys Lite:

- Mange people with person lookup and profile editor, including sending e-mails and SMS/text messages
- Update addresses
- Access and process custom application forms
- Print reports (only pre-defined reports that were saved in VSYS ONE)
- Mark bad phone numbers, handle bounced e-mails
- Read and answer incoming messages
- Credit volunteer hours
- Approve/reject volunteer-entered hours
- Assist volunteer checkin
- See who's missing
- View who's signed in
- Find job opportunities
- Fill job slots
- View recently cancelled assignments
- View/edit job assignments in bulk

### System requirements

VSYS LITE has the same requirements and connects to the same database that VSYS ONE does. Both run on a standard Windows desktop (XP, Windows 7, 8) or server (Server 2003, 2008, 2008R2, 2012) system and can be used in virtual environments such as Terminal Services and Citrix.
